

DOC 8 • Design Handoff

Project: Public Pulse / Poll Platform

Version: v1.1

Status: Design Input Document (Regenerated)

Purpose

Transfer product intent into a design workflow.

This document intentionally does NOT specify:

page layouts

components

wireframes

screen count

navigation

motion systems

visual language

Design owns those.

This document explains:

what product is being built

what users should feel

what information exists

what constraints matter

1. Design Mission

Design a product that turns:

Question

Participation

Result

Insight

Discovery

into a satisfying experience.

Users should feel:

curious

rewarded

seen

surprised

motivated

not:

surveyed

tested

evaluated

worked

2. Design Inputs

Read all documents.

Recommended order:

DOC 0 Master PRD

DOC 7 MVP Scope

DOC 1 Categories

DOC 2 Question System

DOC 3 Question Standards

DOC 4 Visualization

DOC 5 Result System

DOC 6 Governance

Deep Research Output (later)

DV Examples File (later)

Read fully.

Synthesize.

Do not inherit literally.

3. Design Authority

Design owns:

screens

flows

prototype

interaction

motion

navigation

structure

screen inventory

visual language

Design may:

challenge

replace

reinterpret

simplify

Design should explain.

User decides.

4. Interpretation Rules

Treat product docs as:

intent

direction

research

preferences

Treat references as:

examples

patterns

signals

Do NOT treat them as:

strict layouts

pixel constraints

mandatory structures

If better solutions exist:

show them.

Explain preservation of intent.

5. Product Model

Treat product as:

Question

↓

Answer

Result

Next Question

Not:

Feed

Feed

Feed

One question should feel complete.

Results should feel earned.

6. Core Design Goals

Optimize for:

participation

clarity

curiosity

reward

exploration

shareability

Optimize less for:

data density

analytics depth

dashboard feeling

Avoid:

survey fatigue

heavy reading

admin feeling

7. Information Architecture

Design should determine:

pages

entry points

hierarchy

navigation

transitions

relationships

Expected objects:

Questions

Categories

Results

Discovery

Profile (optional future)

Design decides structure.

8. Interaction Philosophy

Interactions should feel:

fast

intentional

playful

light

satisfying

Questions should rarely feel:

form-like

slow

administrative

Design may simplify interaction.

9. Visualization Relationship

Visualization system exists.

Design should:

respect approved families

adapt

modernize

replace weak examples

improve transitions

Questions determine DVs.

DVs should not become decoration.

Result should feel valuable.

10. Reference Handling

DV Examples File exists.

Use it to understand:

taste

density

preferences

interaction direction

Do NOT copy.

Extract:

patterns

rhythm

energy

Replace references freely.

Explain why.

11. Prototype Expectations

Design process may produce:

prototype

concepts

screens

flows

states

dummy data

interaction examples

Design decides output.

No required format.

12. Design Exploration

Design agent should:

explore broadly

narrow intelligently

challenge assumptions

discover opportunities

Design should not wait for instructions.

If information missing:

ask.

Request examples.

Request references.

Request screenshots.

Continue iteratively.

13. Builder Relationship

Builder consumes design.

If implementation conflicts appear:

builder proposes

design explains

user decides

Design owns experience.

Builder owns execution.

14. Open Exploration Areas

Strong freedom:

homepage

question page

result page

navigation

sharing

empty states

transitions

mobile behavior

screen hierarchy

Design may redefine.

15. Success Criteria

Success is NOT:

beautiful screens

complex motion

fancy interactions

Success is:

people answer

people continue

people share

people explore

people remember.

16. Design Challenge Checklist

Ask:

Can this feel lighter?

Can this feel more rewarding?

Can fewer screens work?

Can interaction reduce effort?

Can result increase curiosity?

Can transitions teach?

Challenge assumptions.

Preserve intent.

Final Principle

Do not design pages.

Design participation.
