

DOC 7 · MVP Scope & Product Roadmap

Project: Public Pulse / Poll Platform

Version: v1.1

Status: Scope Freeze (Regenerated)

Purpose

Define what gets built.

This document intentionally does NOT define:

architecture

implementation

technical stack

growth

monetization

Those belong later.

MVP exists to learn.

1. MVP Mission

Validate:

Will users participate?

Will users care?

Will results feel valuable?

Will people explore further?

MVP is NOT built to:

scale

retain

monetize

grow aggressively

This is a learning system.

2. Learning Goals

MVP should teach:

Which categories work

Which question types work

Which result styles work

Which interactions work

Which visualizations work

Which combinations work

Success means:

better understanding.

Not more features.

3. Launch Strategy

Launch philosophy:

few polished questions.

Questions should feel intentional.

Initial dataset target:

~100 curated questions.

Questions are experiments.

Question performance determines expansion.

Questions should be generated later through:

Deep Research

↓

Review

↓

Selection

↓

Launch

4. Dataset Strategy

Treat questions as experiments.

Track performance of:

Question

Question Mode

Category

Visualization

Result Type

Interaction

Participation

Question inventory evolves.

Do not assume initial set survives.

Builder may propose improvements.

5. Core MVP Experience

Supported:

Question discovery

Question participation

Result viewing

Primary visualization

Secondary visualization

Insight cards

Sharing

Explore

Trending

Search

Question reactions

Categories

Minimal administration

Question export

Result export

Question links

6. Discovery Scope

Supported:

Browse

Categories

Trending

Explore

Related

Random discovery

Search

Search scope:

Questions

+

Categories

Searching results: not MVP.

Discovery should remain lightweight.

7. Participation Scope

Supported:

Anonymous participation

Skip

Question reactions

Share

Result exploration

Not supported:

Accounts

Profiles

Followers

Notifications

History

Authentication:

not MVP

anonymous only

Builder may leave migration hooks.

8. Result Scope

Supported:

Primary DV

Secondary DV

Insights

Sample visibility

Result sharing

Optional:

weighted display

Future:

advanced comparisons

historical movement

deep analytics

9. Content Scope

Questions are internal.

No public creation.

Question management:

curated.

Question generation pipeline:

Research

↓

Review

↓

Selection

↓

Launch

Question quality matters more than quantity.

10. Administration Scope

Supported:

Create

Edit

Pause

Archive

Export

Feature

Optional:

homepage tools

basic analytics

Admin may live outside product.

Builder decides.

11. Explicitly NOT MVP

Profiles

Login

Comments

Poll Builder

Tournament

Trust Engine

Aggregation Engine

Analytics Platform

Recommendation System

Experiment Platform

Monetization

Community Systems

User Creation

12. Optional if Cheap

Basic analytics

Simple weighting

Bot resistance

Save question

Feature flags

Future hooks

Builder decides.

13. Success Metrics

Primary:

Questions answered

Participation

Question completion

Question quality

Secondary:

Sharing

Category performance

Visualization performance

Exploration

Not success:

time spent

retention

DAU

revenue

14. Roadmap

Phase 0 Planning

↓

Phase 1 MVP

↓

Phase 2 Question Expansion

↓

Phase 3 Trust Systems

↓

Phase 4 Creation Systems

↓

Phase 5 Community Systems

Illustrative only.

Builder may adjust.

15. Builder + Design Relationship

Builder owns:

implementation

Design owns:

experience

Both may critique.

User decides.

Builder and design should preserve:

intent

not literal execution.

16. Challenge Checklist

Ask:

Can this be removed?

Can this teach us more?

Can fewer features work?

Can questions improve?

Can participation increase?

Challenge complexity.

Preserve learning.

Final Principle

Build to learn.

Not to scale.
