

DOC 5 • Result System

Project: Public Pulse / Poll Platform Version: v1 Status: Planning Freeze (Implementation Open)

Purpose: Define how results are revealed, experienced, explored, interpreted, and shared.

This document does NOT define:

- page layouts
- component structures
- exact navigation
- database aggregation
- weighting algorithms

Those belong to later systems.

This document defines:

Question ↓

Answer

↓

Result

↓

Interpretation

↓

Exploration

↓

Share

1. Philosophy

Result is not output.

Result is reward.

Users should feel:

"I contributed."

+

"I learned something."

+

"I want to continue."

Avoid:

survey completion feeling

dashboard feeling

empty numbers

2. Core Principles

R1

One Question = One Experience

Question

Answer

Result

Insights

Discussion

Exploration

exist together.

Do not force separate mental models.

Layout is implementation.

R2

Results are earned by quality, not hidden artificially

Default philosophy:

Results should appear if enough meaningful participation exists.

Avoid:

empty charts

fake precision

dead pages

Result reveal can vary by question.

No universal rule.

R3

Result must reward participation

Answering should improve experience.

Not necessarily unlock.

But create value.

Examples:

Highlight

Insight

Expanded view

Comparison

R4

Results are recommendation systems

Results guide:

discussion

exploration

future answering

sharing

Results are not final truth.

3. Result Lifecycle

Question created

Answers collected

Threshold reached

Primary result activates

Exploration expands

Question may freeze/archive

Threshold rules: implementation decision

No hard lock.

4. Reveal System

No single reveal strategy.

Available patterns:

Pattern A Immediate

Question opens

↓

Result visible

Use: high-volume questions

Pattern B Threshold

Result appears only after sufficient answers

Use: low participation

Pattern C Progressive

Preview

↓

answer

↓

more detail

Use: special cases

Selection: question dependent

Builder decides.

5. Result Composition

Every result page should attempt:

Primary Result

+

Personal Layer

+

Optional Exploration

Keep:

simple first

depth later

6. Primary Result

Purpose: Immediate understanding

Rules:

One dominant visualization

Clear hierarchy

Readable instantly

No dashboard overload

Primary should answer:

“What happened?”

Examples:

Split

Map

Leaderboard

Tier

Bracket

Question dependent.

7. Secondary Results

Purpose: Curiosity

Recommended: 0–2

Examples:

Regional

Alternative visualization

Distribution

History

Comparison

Rules:

Do not repeat information.

Every secondary must add meaning.

8. Personal Layer (Mandatory)

Purpose: Make result feel relevant.

Inputs:

User answer

Aggregate

Context

Outputs:

Highlight

Insight

Comparison

Examples:

You matched X%

You differ

Your region differs

You picked minority

You align with majority

Rules:

Template driven

Not generative

Short

Optional

Not manipulative

9. Insight Cards (Mandatory MVP)

Insight cards should feel:

discoverable

light

interesting

Not:

fortune cookies

Examples:

Most users picked opposite

Your answer matches trend

You selected uncommon option

People who answered similarly explored X

Insight generation: implementation later

10. Data Visibility

Default visible:

Vote count

Sample size

Optional:

Raw

Weighted

Methodology

Rules:

Trust visible

Trust not dominant

11. Refresh Behavior

Result updates:

After answer

Periodic refresh

Manual refresh

Avoid: constant movement

Recommendation:

stable experience

12. Exploration Layer

Purpose: Reward curiosity.

Examples:

See more

Open another DV

Expand

Compare

Rules:

No infinite drilldown

No analytics rabbit hole

Recommended: maximum 2-3 layers

13. Discussion Layer

Comments: supported

Questions:

like

dislike

comments

Rules:

Discussion should support.

Never dominate.

Moderation: future.

14. Sharing System

Every result should be shareable.

Formats:

Image

Link

Structured card

Rules:

Readable

Compact

Context preserved

Share should explain.

Not bait.

15. Failure States

If insufficient data:

Show:

placeholder

context

encouragement

Avoid:

fake precision

empty charts

dead visuals

16. Builder Challenge Checklist

Builder should challenge:

Should result appear?

Should insight exist?

Is visualization necessary?

Can fewer elements work?

Does result reward participation?

Does sharing create reach?

Can result become addictive?

Challenge everything.

Keep intent.

17. Design Agent Instructions

Design owns:

layout

navigation

visual hierarchy

transitions

component system

Respect:

single experience

primary hierarchy

progressive depth

Final Principle

Answering ends.

Experience begins.
